

El compromiso de
Orthic Corporativo Integral Hospitalario es y será
siempre mejorar la salud y la calidad de vida de los
ciudadanos, ofertando asistencia, servicios y productos
sanitarios excelentes.

Bajo un enfoque centrado en el paciente y familiares,
brindamos bienestar y cuidados del más alto nivel, de la
mano con profesionales de atención primaria, hospitalares,
médicos y técnicos altamente calificados.

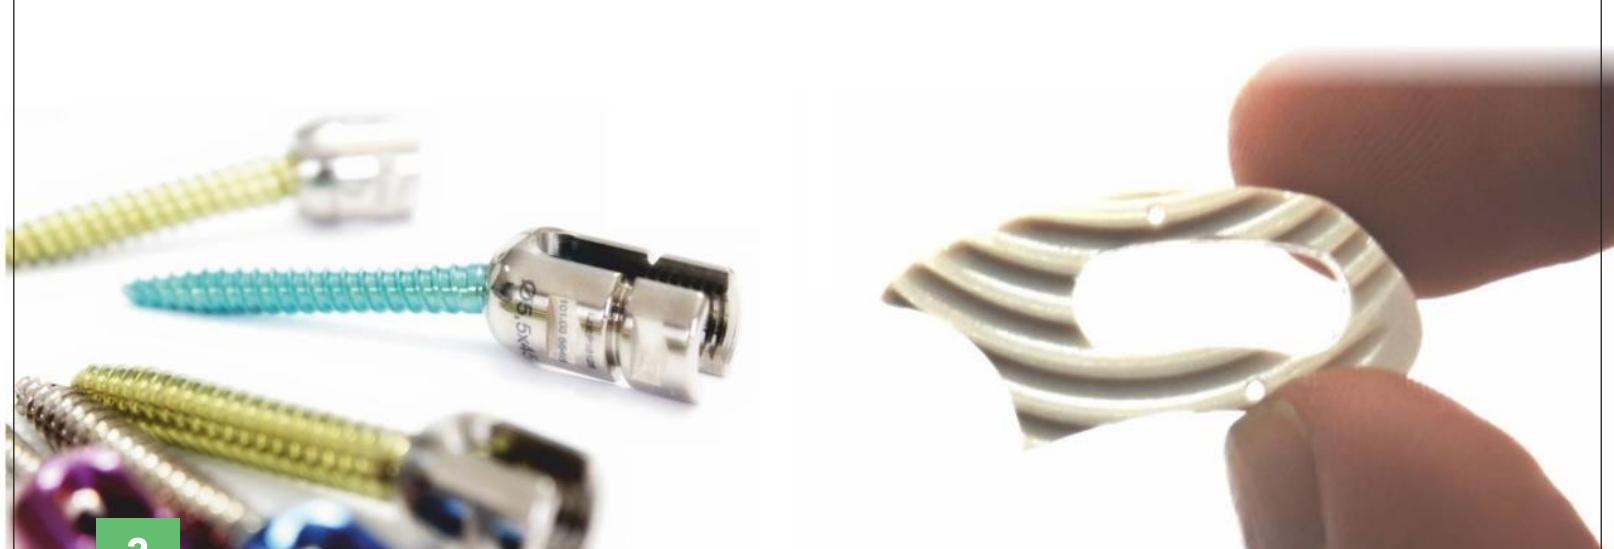

Products & Raw Materials

Material selection is one of the most important point for implants.

Titanium Alloy (Ti6Al4V-Grade 5 / ISO 5832-3 / ASTM F136) and PEEK (Polyether-ether-kethon / ASTM F2026) are used as raw materials for all Prodorth products and these are all originated from EU and USA. Both material are biocompatible and adequate for long term use (C = Permanent (> 30 days)).

PEEK material is a remarkable raw material with its unique properties

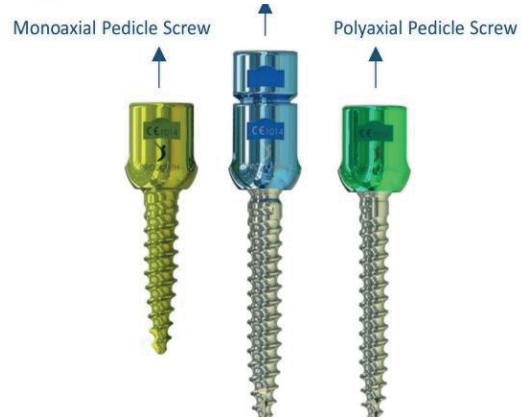

- It does not cause any lesional problems.
- Has elastical and hardness features near to bone tissue.
- Biocompatible.
- Titanium alloy materials give an opaque image under X-Ray, whereas PEEK materials is able to be viewed transparently. This provides a more efficient follow-up for the bone fusion through the implant material at post-operative duration.

POSTERIOR PEDICLE SYSTEMS

Thoracolumbar Pedicle Screws

- Prodorth Pedicle Screws have a unique design with V-Shaped highly sharp threads, as well as a polished surface which results in successful clinical outcomes.
- As it's proven so far, there is a direct relationship between the profile and the design of the pedicle screws with the pull-out strength, hence a strict quality control process is performed on the threads during the production.
- Stronger connection with head part by milled surface feature.
- More reliable tightening with the torx design of setscrew. Reverse angled setscrew thread design.
- Cutting flute design for facilitating bone insertion.
- Mono threaded and double threaded options are available on request. Double threaded Pedicle Screws have been designed for reducing the number of turns required for a complete implantation which reduce the operation time in result.
- Titanium / Ti6Al4V (ASTM F 136) is used as raw materials for all Prodorth pedicle screws and these are all originated only from reliable partners in USA.

Dual Threaded Screws

SCREW SYSTEMS TECHNICAL SPECIFICATIONS

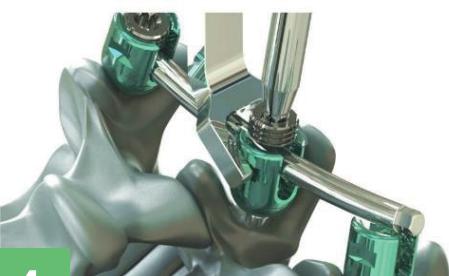

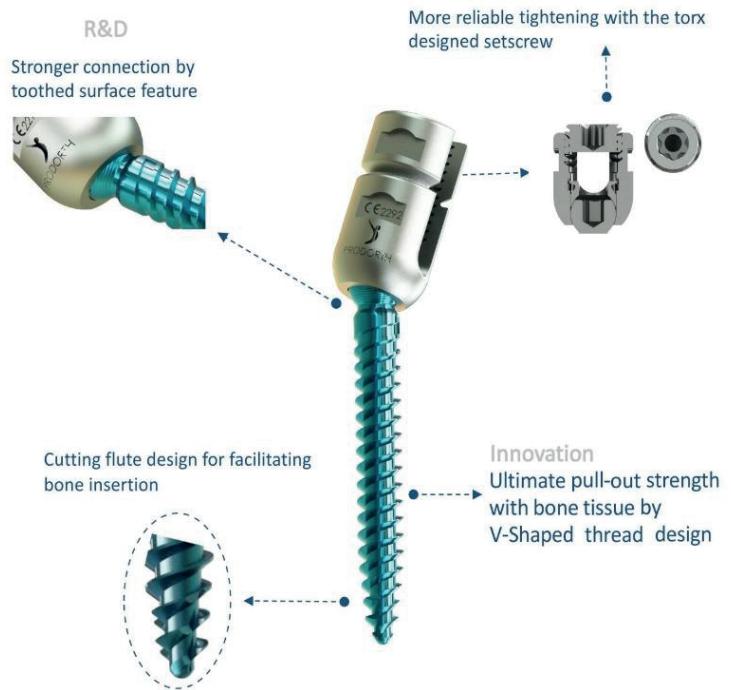

Prodorth Posterior Fixation System is used for stabilizing the disorders in spine. The system is composed of different type of pedicle screws, rods, connectors and some other supplementary elements.

This system is completely manufactured from Ti6Al4V (ISO 5832-3) material. Prodorth Posterior Fixation System has been used since 2013 in domestic market (Turkey), 2014 in EU countries, and Asia-Pacific region and since 2015 in South America and Middle-East. We continue our journey by expanding in new markets with an increasing satisfaction from the surgeons.

Within recent years, the system has been developed and revised according to feedbacks from surgeons and customers, which led to establishing a reliable system that corresponds to the scientific requirements and the finest technical details demanded by surgeons.

Mechanism of Action for Prodorth Posterior Fixation Implant System is implantation of the system into the vertebrae and connection with rods and transverse connectors which generates an efficient support to spine by a rigid construction in order to provide stabilization of spinal segments in skeletally mature patients as an adjunct to fusion in the treatment of the acute and chronic instabilities or deformities of the cervical, thoracic, lumbar, and sacral spine.

In other words, it provides stabilization to promote fusion following reduction of fracture/dislocation or trauma in the spinal junction and the spine.

RODS & CONNECTORS

Prodorth Connectors have been designed to provide the most stable construction with different sizes.

We offer mainly 4 types of connectors as Linear / Multiaxial / Domino / Lateral connectors as well as various designs considering the needs of our clients.

Ti6Al4V (Grade 5) is used as raw materials for all Prodorth connectors.

And these are all originated from reliable partners in USA.

HOOKS

Multiaxial Connector

PROLOBSTER™

PROLOBSTER™ V.2

Possible to be positioned in different angles

Lateral Connector

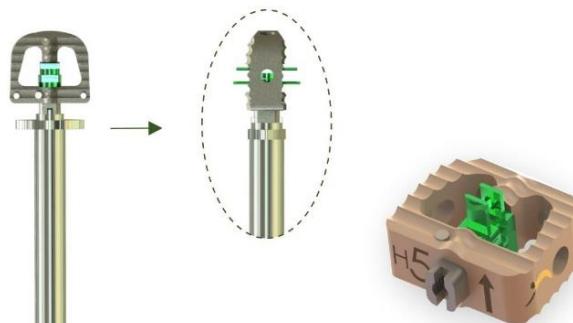

Linear Connector

Special design for the most effective movement capability

ANTERIOR CERVICAL PEEK CAGES

- Toothed surface is designed to prevent migration.
- Anatomical geometry.
- X-Ray Markers provide an easy placement.
- Made of PEEK material, originated from EVONIK Industries Germany. Titanium alloy materials give opaque image under X-Ray, however PEEK materials is able to be seen transparently. This provides efficient following of the bone fusion through the implant at the intended periods.
- Blades for a more reliable holding between the endplates.
- Maximum Strong Construction / Fusion Space ratio.
- Various sizes and footprints are available.

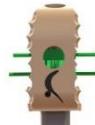

PROYSTER™

BLADED OPTIONS

Mono Bladed

Double Bladed

STANDARD TYPES

ANTERIOR CERVICAL PEEK CAGE WITH SCREWS

Prodorth Cervical PEEK cage with screw provides a more reliable attachment to the vertebrae due to the screw on it.

The system offers an interbody fusion device with screw fixation and is intended to be used in ACDF procedures. Prodorth PEEK cage with titanium screws and locking mechanism provides a stable fixation without the need of an anterior plate.

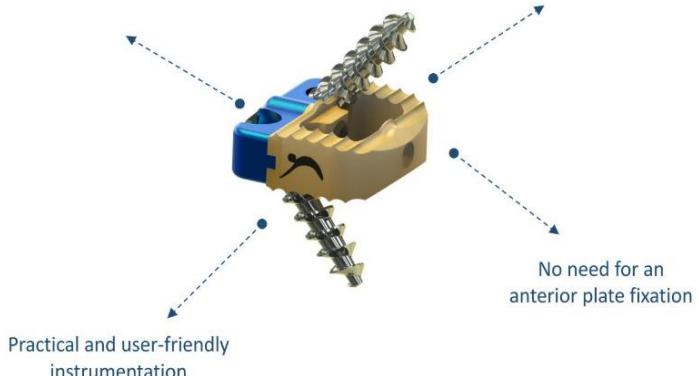

Prodorth Cervical PEEK cage with screw is available in different footprints and heights.

This product is manufactured from PEEK (Polyether-ether-kethon/ ASTM F2026) which is a polymer based composite material, as well as Ti6Al4V grade 5 (ASTM F136 / ISO 5832-3).

Stand-alone, more effective cervical fusion through an anterior approach

Large graft space

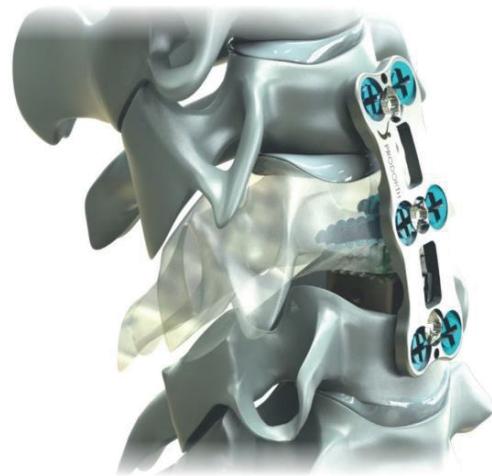

Locking mechanism for the screws

ANTERIOR CERVICAL PLATES

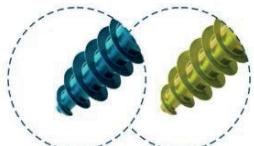

Prodorth Cervical Plate Systems is designed to meet the clinical expectations of anterior cervical surgery and it offers a wide range of plates and screw sizes. Fixation is provided by screws inserted into the vertebral body of the cervical spine using an anterior approach.

Prodorth Cervical Plate Systems consist of cervical plates, locking caps, bone screws, and the instruments required for implanting this specific system. All implant components are made from a titanium alloy grade 5 (ASTM F136 / ISO 5832-3).

Variety in plate sizes which provides a convenience at implant selection for surgeons

Different bone screws can be identified by their unique color coding.

User-friendly instrumentation

Easier and more efficient procedures are possible with only single driver to place screws and secure the locking mechanism

Simplicity for the locking mechanism for the screws

Deep screw threads with high pull-out strength for a great fixation.

ANTERIOR CERVICAL DISC PROSTHESIS

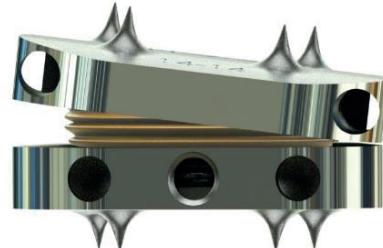

Unique Design

Prodorth Cervical Disc Prosthesis is an implantation system used for eliminating the complaints of the patients which arise from the herniation at discs, traumas or any disorders on cervical spine.

PROCORAL V.2 is composed of 2 plates working separately and connected each other by a kind of a particular pin, besides a special designed PEEK system is used at the inner mechanism to obtain a more efficient movement capability.

Using PROCORAL V.2 cervical disc prosthesis instead of traditional fusion cages minimize the Heterotopic Ossification, with its capability to make motions to various directions and in result it has more similar specifications to an healthy disc.

PROCORAL V.2 is designed as Metal -PEEK- Metal (M-P-M) construction with various sizes and footprints. One piece design of it, provides an easier surgical technique as well as the great fixation with its inserter. Furthermore its wear resistance is pretty higher than competitors with its M-P-M design and for long-term, better results have been obtained on post-operative period. The Prodorth's top-notch technology "PEEK tube" cover around the inner mechanism prevent the undesired bone fusion into the disc prosthesis.

PROCORAL™

Please contact for further information concerning the dimensions of the implants

Stable connection with the instrument

ANTERIOR CERVICAL DISC PROSTHESIS

Unique Design

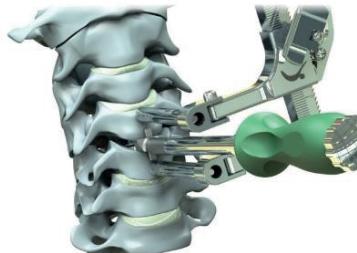

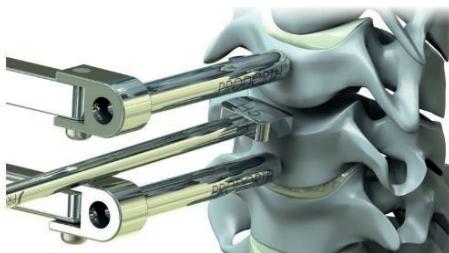

- One-piece Design which provides a user friendly application.
- PEEK material (ASTM F2026) used in the inner mechanism which provides a super-smooth surface for the best motion capability.
- Dark anodized and rough surface options are available.
- Stronger & Sharper pins on the surface as well as with the new designed geometry in the most appropriate form for the anatomical structure of intervertebral area.
- Allows axial rotations, flexion-extension and lateral bending.
- Perfect MR visibility by the Titanium (ASTM F136) endplates.
- Stable connection with the inserter.
- PEEK cover which is shaped as a tube, has been positioned around the inner mechanism in order to prevent the bone-fusion through the inside of disc prosthesis besides it supports the shock- absorption.

PROCORAL™

INSERTER

TLIF PEEK CAGE*Pivotal Design*

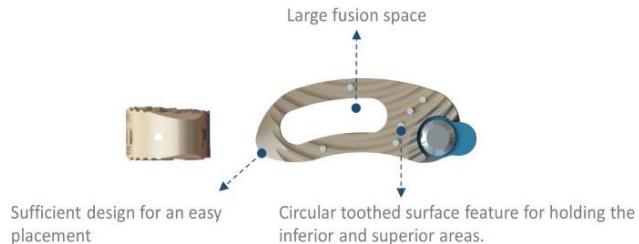

Prodorth TLIF Cage is intended for single use only and restore the degenerative disc pathologies.

Prodorth TLIF Cage is made of PEEK (ASTM F2026) which is a polymer based composite material and Ti6Al4V (ASTM F 136) material.

- Prodorth TLIF Cages ® provides an uninterrupted guidance during operation.
- Circular toothed surface feature for a better holding on the inferior and superior areas.
- It has the capability of movement to both directions.
- It can be fixed by rotating the wheel behind Inserter, and it is easily released by loosening.
- This provides an easy positioning as required.
- After discectomy, the wheel is rotated clockwise while the TLIF cage is positioned upright and it's placed into intervertebral area so on.
- After that the wheel is loosened and the PRODOLPHIN is released as at the required position.
- All the procedure is performed by a single instrument.

PRODOLPHIN™ 

PLIF PEEK CAGES

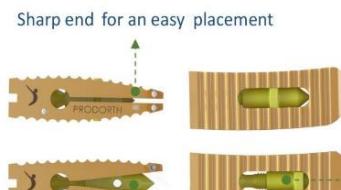

Standard PLIF - Expandable PLIF

Standard and Expandable types besides various sizes are available.

- Made of PEEK(ASTM F2026) which is a polymer based composite material and Ti6Al4V (ASTM F 136) materials.
- Easy to implant with sharp ended design.
- Stopping system during expansion.
- Holding inferior and superior areas strongly with appropriate surface design.
- Large fusion space.
- Toothed surface design to prevent migration.
- Anatomical geometry.
- X-Ray Markers for easy visualization during implantation.

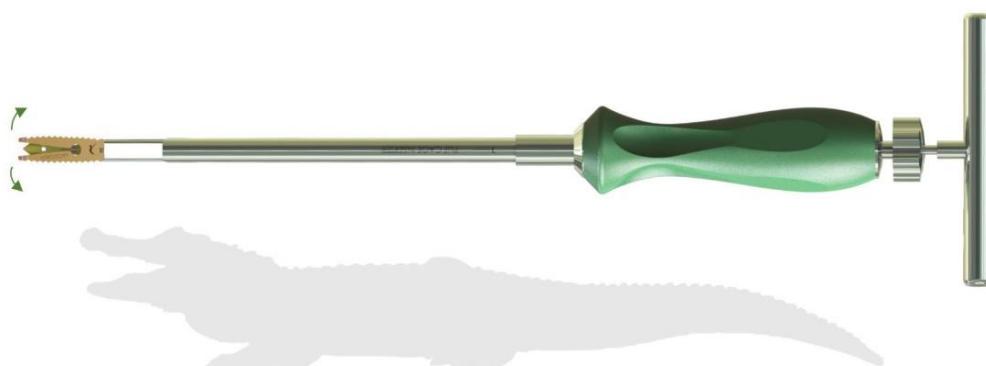

PROCORB™

Expansion is stopped automatically when it reaches its limit

PROCAYMAN™

PLIF PEEK CAGE with THREAD

PEEK material (ASTM F2026) and Titanium (ASTM F 136) is combined through the creation journey of PROMOLE. As it's accepted by health authorities, PEEK does not cause any lesional problems in addition its elasticity and hardness features are quite near to bone tissue.

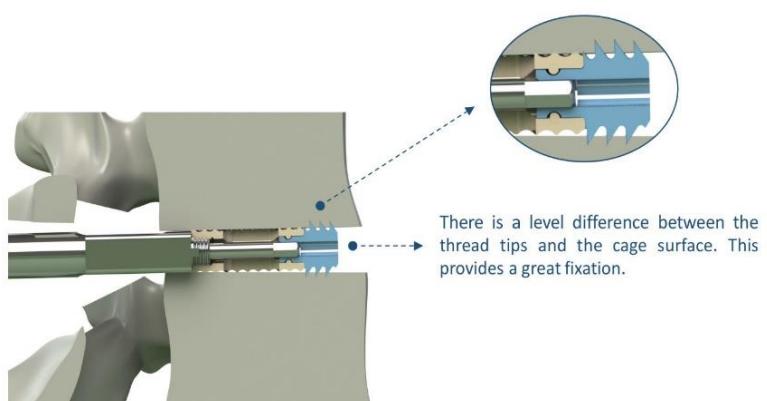

Since PROMOLE has the titanium threads on the tip and the marker pins behind, surgeon can follow PROMOLE during surgery very efficiently.

PROMOLE can be connected with its instruments very easily.

Once the internal apparatus of its inserter placed through the inserter, it can rotate the thread at the front .

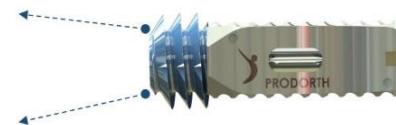

When the thread is rotated clockwise, PROMOLE will be pulling itself into the intervertebral area. Likewise it is able to be unscrewed by rotating the thread anticlockwise "These specifications of it provides a more reliable and easy implantation by comparison with the traditional PLIF procedures"

- PROMOLE® Cages provides a gradually placement.
- Toothing surface feature for best holding the inferior and superior areas.
- PEEK material is originated from EVONIK Industries Germany.
- X-ray marker pins for the visibility.
- Various sizes are available on request.

PROMOLE™

Its screw provides a placement gradually, no need to hammer

Screw rotates separately from the cage, hence it pulls the cage through the vertebrae.

Lateral Connector

Primom™-OC Spinal Fixation System

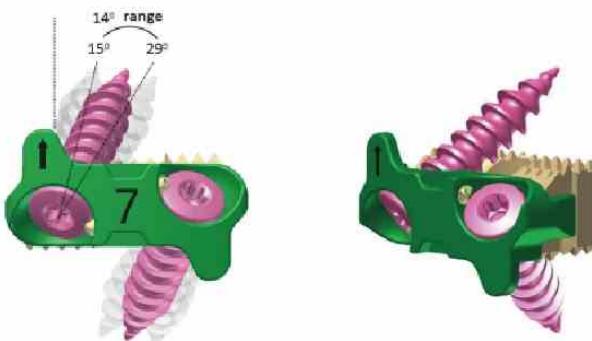

Product	Diameter(mm)	Length(mm)	Increments(mm)
Occipital Bone Screw	Φ4.5	6-16	2
	Φ5.25	6-16	2
Medial Favored Angle Screw	Φ3.5	12-26	2
	Φ4.0	12-42	2
Axial Connector		3.5-5.5	
		3.5-6.0	
Product	Diameter(mm)	Length(mm)	Increments(mm)
Polyaxial Screw	Φ3.5	8-26	2
	Φ4.0	8-42	2
Favored Angle Screw	Φ3.5	12-26	2
	Φ4.0	12-42	2
Head-to-Head Cross Connector		21, 28, 35, 42

PEEK Cervical Cage is intended to treat cervical spine pathologies. This PEEK Cervical Cage's unique design allows a maximum interbody fusion and offers an optimum stability. The specific shape and the pure PEEK composition of this implant ensure excellent bone fusion.

Implant Features – Cage Design

» Increased stability and fusion

Cage design for an optimum primary stability to restore the interbody space and preserve cervical lordosis

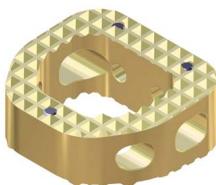

Large graft surface to enhance bone fusion

» Anatomical shape

Designed to maximise contact with the intervertebral endplates

» Reinforced security

Inferior and superior teeth on surface to avoid risks of migration

Implant Features – PEEK-OPTIMA®

» Safety

Elasticity prevents sinking: less risk of endplate penetration

Withstands repeated autoclave sterilizations

» Medical imaging (X-ray, CT, MRI)

Radiolucent material to allow accurate fusion follow-up

» Biocompatibility

No carbon fibres: no risk of inflammatory reaction

CE-marked and cleared by FDA for long-term implantation in the human body

» Enhanced bone fusion

No stress shielding

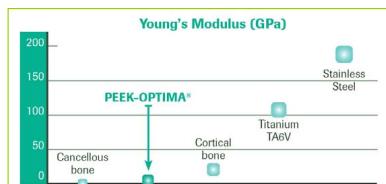

Optimum load repartition

Bone growth enhancement thanks to micro-movements

» Modulus of Elasticity

Elastic Modulus between cancellous and cortical bone

Ideal load sharing implant

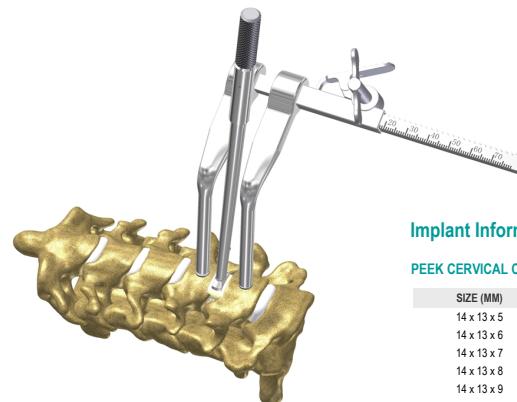

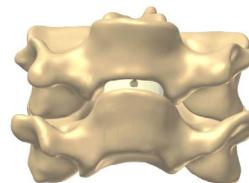

Indications for Use

The PEEK Cervical Cage is a surgical implant for cervical arthrodesis by anterior approach, designed to optimize bone fusion from C3 to C7 levels. It is an intersomatic cage whose main function is to maintain the discal height and the radicular decompression by intersomatic distraction. Its design favours osteogenesis. The indications are:

- ◆ Stabilisation after treatment of a herniated cervical intervertebral disc or osteophytosis compressing the nerve roots and/or spinal cord.
- ◆ Degenerative intervertebral instability.

NOTE:

Since the PEEK Cervical Cages were not developed as "stand-alone" implants, the use of additional posterior instrumentation (for example with Cervical Plate) is strongly advised.

Implant Information

Variable Angle ACIF Cage

The Variable Angle ACIF Cage is a stand-alone implant for use in cervical interbody fusion, which combines the functionality of a cervical interbody spacer and benefits of an anterior cervical plate.

Implant Features

» Zero-profile midline designed to minimize the risk of contact with vessels and adjacent soft tissues

» Prevents adjacent level ossification

Easy of use

- Variable angle screws, designed with a wide range of allowable screw trajectories, potentially facilitate screw insertion.
- One-step blocking mechanism features audible, tactile and visual cues to confirm screw is blocked upon insertion.
- Small incision sizes are possible in comparison to plate and spacer usage.

Interbody Spacer

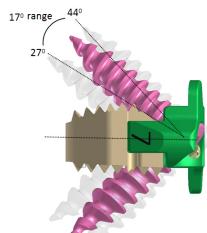

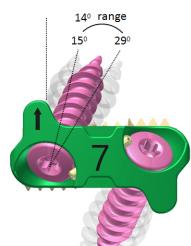

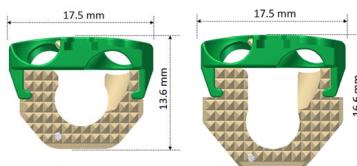

- Spacer component is made of a biocompatible radiolucent polymer (PEEK) which allows visualization and assessment of the bones to be fused.
- Teeth on the implant surface provide initial stability
- Radiopaque marker for posterior visualization during imaging

Interbody plate with stops

- Titanium alloy interbody plate provides a stable fixation with screws
- Stresses in the interbody plate with stops are decoupled from the spacer through an innovative interface
- Contralateral safety stops designed to prevent over insertion and align with the anterior surface of the vertebral bodies

Variable angle screws

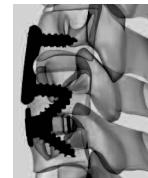

- Self-drilling and self-tapping screws
- Screws can be inserted 27° – 44° (17° range) in cranial/caudal direction and 15° – 29° (14° range) in medial/lateral direction
- Designed to help prevent graft expulsion
- Screws are allowed to toggle postoperatively within vertebral bodies, which may potentially prevent load shielding of the graft in the event of graft subsidence

Indications for Use

The VA ACIF system is intended for use following anterior cervical discectomy for reduction and stabilization of the cervical spine (C2– C7).

- Degenerative disc disease (DDD, defined as neck pain of discogenic origin with degeneration of the disc confirmed by history and radiographic studies)
- Spinal stenosis
- Failed previous fusions
- Pseudoarthrosis

EUROFIX VTP SYSTÈME

Système jetable pour vertébroplasties.
Disposable set for Vertebroplasty.

Le Eurofix VTP Système est composé de:
A Aiguille pour ponction du corps vertébral avec un mandrin de: 2,4 mm x 100 mm / 3,0 mm x 100 mm et 150 mm.

- B** Raccord m/h Luer Lock.
- C** Seringue de 10 ml.
- D** Piston pour seringue.
- E** Spatule.
- F** Récipient pour le mélange.
- G** Marteau chirurgical.
- H** Canule d'aspiration.

Système jetable conçu pour être utilisé avec le pistolet réutilisable Synimed v3.

The Eurofix VTP Système includes:
A Vertebral body puncture needle with mandrin: 2,4 mm x 100 mm / 3,0 mm x 100 mm and 150 mm.
B Luer Lock m/f connector.
C 10 ml syringe.
D Syringe piston.
E Spatula.
F Mixing bowl.
G Surgical hammer.
H Suction cannula.

Disposable set to be used with the reusable Synimed v3.

GUN SYNIMED V3

Dispositif d'injection réutilisable.
Reusable injecting device.

DISPOSITIF D'INJECTION RÉUTILISABLE, CONSTRUIT EN ALUMINIUM ANODISÉ ET ACIER INOXYDABLE.

Principaux avantages:

- Utilisation aisée.
- Design ergonomique.
- Stérilisation par autoclave, chaleur sèche ou ETO.
- Injection précise du ciment à basses et à hautes pressions.
- Permet une interruption immédiate de l'injection du ciment.

**REUSABLE INJECTING DEVICE
MADE OF ALUMINUM AND STAINLESS STEEL.**

Main features:

- Easy to operate.
- Ergonomic design.
- Steam, dry heat and ETO sterilizable.
- Precise delivery of cement at low and high pressures.
- Allows the immediate interruption of cement delivery.

Ø 3,0 x 100 mm REF 884111 - Ø 3,0 x 150 mm REF 884112

REF 880579

CANULE EUROFIX DUAL

Canule stérile de ponction pour vertébroplasties et biopsie.
 Sterile puncture cannula for Vertebroplasty and Biopsy.

- Les faibles dimensions du corps de la canule facilitent l'abordage des vertèbres contigues sans interférence.
- Les caractéristiques particulières du connecteur type Luer assurent une solide union entre les composants.
- Parfait tranchant et biseau atraumatique.
- Acier inoxydable de qualité chirurgicale.

- Contiguous vertebrae can be easily approached due to the reduced dimensions of the cannulas handles.
- Same applies to bi-pedicular approaches.
- A firm connection is achieved by means of a double thread Luer.
- Excellent sharpness prevents undesired pedicle fractures when positioning the cannula.
- Non-traumatic bevel.
- Surgical grade stainless steel.

Ø 3.0 x 150 mm REF 884199

CANULE EUROFIX MÉTALLIQUE

Canule stérile de ponction pour vertébroplasties.
 Sterile puncture cannula for Vertebroplasty.

- Les faibles dimensions du corps de la canule facilitent l'abordage des vertèbres contigues sans interférence.
- Les caractéristiques particulières du connecteur type Luer assurent une solide union entre les composants.
- Parfait tranchant et biseau atraumatique.
- Acier inoxydable de qualité chirurgicale.

CANULE EUROFIX PLASTIQUE

Canule stérile de ponction pour vertébroplasties.
 Sterile puncture cannula for Vertebroplasty.

- Design ergonomique.
- Les caractéristiques spéciales du connecteur type Luer assurent une solide union entre les composants.
- Excellent tranchant et biseau atraumatique. Acier inoxydable de qualité chirurgicale.

- Plastic handle of ergonomic design.
- The special characteristics of the Luer connector assure a firm connection between the components.
- Excellent sharpness combined with a non-traumatic bevel. Surgical grade stainless steel.

Eurofix Kypho Système est conçu pour le traitement percutané des corps vertébraux, selon la technique de la cyphoplastie par ballonnet.

La cyphoplastie par ballonnet est utilisée dans le traitement percutané des fractures vertébrales pour restaurer la hauteur du corps vertébral (en particulier dans les cas aigus), ou dans les cas pour lesquels une application de ciment par une autre méthode pourrait entraîner un risque d'extravasation du ciment. Il est recommandé pour cette technique d'utiliser du ciment Eurofix Kypho.

Présentation

Eurofix Kypho Système se présente dans deux blisters Tyvek™ scellés et stérilisés par ETO, prêts à l'emploi, avec les instructions d'utilisation. Chacun de ces blisters contient les éléments suivants :

BLISTER #1

- 1 Canule de ponction osseuse (3 x 150 mm)
- 1 tige guide (2 x 245 mm)
- 1 Porte-tige
- 1 Marteau chirurgical
- 1 Canule pour cyphoplastie (4x150mm) (canule de travail)
- 1 Fraise avec poignée (3.9 x 200 mm)
- 1 Mandrin avec poignée.

BLISTER #2

- 1 Ballon pour cyphoplastie 10mm, 15mm ou 20mm
- 1 Seringue avec manomètre de double lecture: PSI / ATM
- 1 Récipient de mélange pour le ciment
- 1 Spatule pour le mélange du ciment
- 3 Seringues de 3 ml pour l'application du ciment
- 3 Canules d'aspiration du ciment
- 1 Tube connecteur.

Avantages

- Facile à utiliser.
- Design ergonomique.
- Facile approche à plusieurs niveaux: poignées courtes ne interférer pas les uns avec les autres.
- Plein fil Luer: une meilleure fixation de composants.
- Mandrin autobloquant.
- Fil-guide exclusif optimise l'aiguille.

The Eurofix Kypho Système Set has been designed to perform the percutaneous treatment of vertebral bodies by means of the balloon kyphoplasty technique. The balloon kyphoplasty is used for the percutaneous treatment of vertebral body fractures (mainly in acute cases), where it is sought to restore the height of a vertebral body, or in those cases where cement application through other methods might be liable to produce a cement leakage.

We recommend the use of Eurofix Kypho cement for this surgical procedure.

Presentation

The box contains the instructions for use leaflet and two Tyvek™ sealed blisters sterilized by ETO containing:

BLISTER #1

- 1 Bone puncture cannula (3 x 150 mm)
- 1 Guide wire (2 x 245 mm)
- 1 Guide wire chuck
- 1 Surgical hammer
- 1 Kyphoplasty cannula (4 x 150 mm) [working cannula]
- 1 Drill with handle (3.9 x 200 mm)
- 1 Mandrel with handle.

BLISTER #2

- 1 Kyphoplasty balloon 10mm, 15mm or 20mm
- 1 Syringe with dual scale manometer: PSI / ATM
- 1 Cement mixing bowl
- 1 Cement mixing spatula
- 3 Cement application syringes (3 ml)
- 3 Cement aspiration cannulas
- 1 Connector tube.

Advantages

- Easy operation.
- Ergonomic design.
- Easy multi-level approach: short handles do not interfere with each other.
- Full Luer thread: better attachment of components.
- Self locking mandrel.
- Exclusive guide wire optimizes needle positioning.

**LUMBAR VERTEBRA
OPERATION UNDER ENDOSCOPIC**

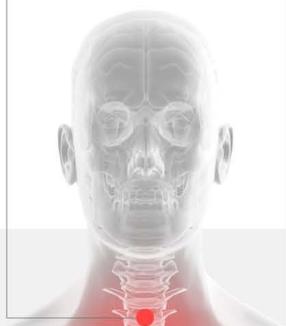

CERVICAL VERTEBRA TUNNEL ABLATION

cervical vertebra tunnel ablation

- 1、Cervical intervertebral disc ablation ;
- 2、Intradiscal fibrous ring therapy;
- 3、Plasma RF ablation neurolysis;
- 4、Plasma RF ablation of intervertebral disc protrusion;
- 5、Inclusive type of intervertebral disc protrusion radiofrequency ablation;
- 6、High pressure disc type cervical intervertebral disc herniation;

Model: SDJA01
product order: SL101

- Seamless plastic design
- 360° rotation design for cutting and ablation
- Bone marrow nerve system detection
- Working temperature under 40°C, minor damage to nerve system
- Diversified structure design for different clinic usage

Model: SDJA02
product order: SL102

- 1、Lumbar intervertebral disc tunnel ablation
- 2、Intradiscal fibrous ring therapy
- 3、Plasma RF ablation of intervertebral disc protrusion.
- 4、Lower limb pain intervertebral disk plasma radiofrequency ablation
- 5、Inclusive type of intervertebral disc protrusion radiofrequency ablation
- 6、High pressure disc type cervical intervertebral disc herniation
- 7、Plasma RF ablation neurolysis

lumbar vertebra/lumbosacral tunnel ablation

cervical vertebra operation under endoscopic

Model: SDJA08
product order: SL301

- Different cervical and lumbar vertebra ablation
- Intelligent detection, targeted tissue vaporization and ablation
- Minor electrical nerve stimulation, precise operation around nerve root
- Flexible and adjustable angle design for operational convenience
- Ablation of vegetation on intervertebral disc without damaging biomechanical stability

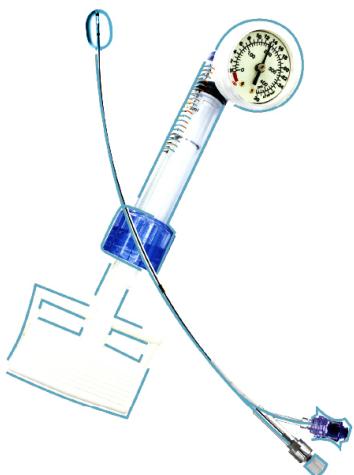

Model: SDJA09
product order: SL302

lumbar vertebra operation under endoscopic

Bone Filler Device (Standard & Biopsy)	3+1	
KMC Puncture Needle	1	
KMC Medical Balloon Catheter Syringe Pump	1	

Percutaneous Access Device

Integrated, one-step design for quick and efficient percutaneous access to bone and create bone tissue guide channel.

Reduce the trauma effectively.

Available bevel or diamond tips to let doctors choose according to clinical needs.

Cannula outer diameter 3mm; inner diameter 2mm;

Probe outer diameter 1.9mm

Diamond tip
(Solid&precision)

Guild wire

Outer Diameter: 1.55mm

Expansion cannula

Cone tip design cut cleanly, go through cancellous bone easily and fit for biopsy
Inner cannula outer diameter 3.5mm; inner diameter of head 1.8mm

Protective cannula outer diameter 4.2mm; inner diameter 3.7mm

protective cannula

expansion edge
(solid&precision)

Aiguille

Special material and precise grinding to meet clinical needs

Aiguille outer diameter 3.5mm

Protective Cannula outer diameter 4.2mm; inner diameter 3.7mm

protective cannula

Aiguille edge
(Solid&precision)

Bone Cement Applier

Smaller-diameter design and precise process for ideal feeding

Standard-interface design for reliable connection to reduce operation risk

Probe postouter diameter 2.6mm

Probe cleaveouter diameter 3.6mm; inner diameter 2.0mm

Volume: 1.5ml/pc

Spitral propeller

Balloon Inflation Pump

Central pressure accurately Stable performance easy to operate Non-latex

Product Name	Type/Model	Maximum Range
AND	YLB-20	20ml
Balloon Inflator Pump	YLB-25	25ml
	YLB-30	30ml
	YLB-40	40ml

Bone cement Mixing and Injection Device

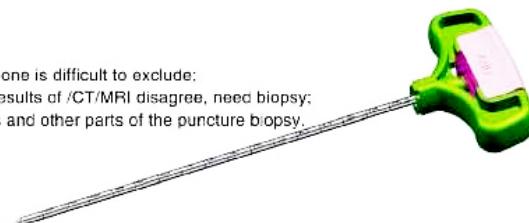

It is a matching device for AND Kyphoplasty System, which is used to mix bone cement powder and liquid as well as to inject the mixture.

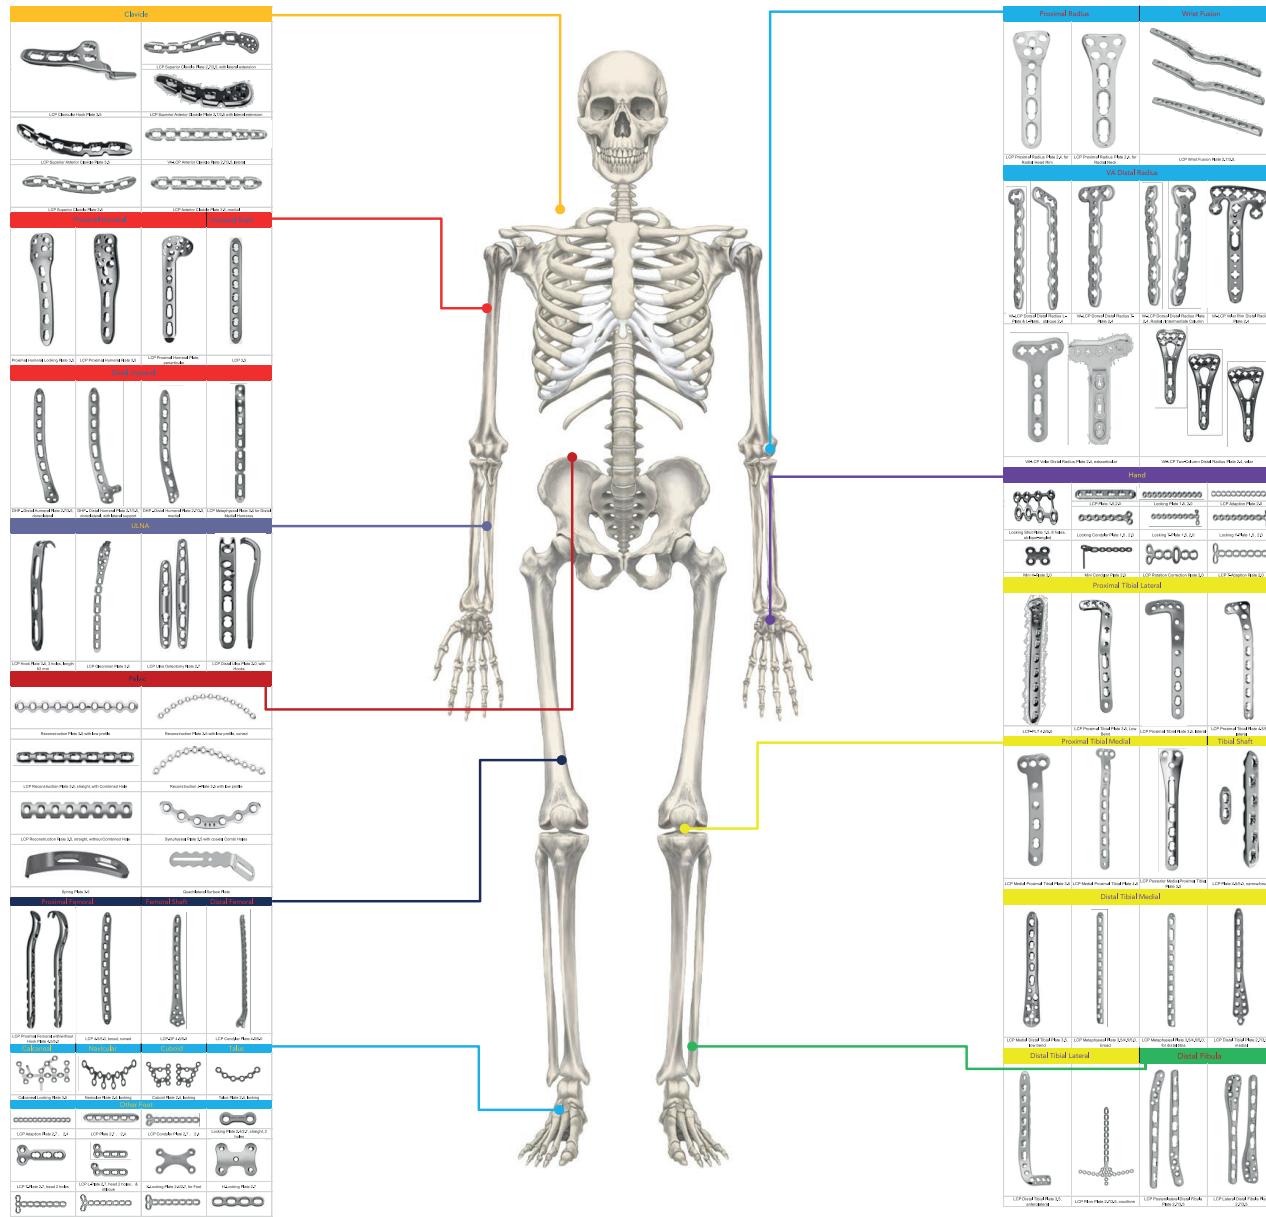

Biopsy system

Indication

1. failed to diagnose bone tumor, malignant bone is difficult to exclude;
2. clinical diagnosis and X-ray examination results of /CT/MRI disagree, need biopsy;
3. applicable to the spine, limbs, joints, pelvis and other parts of the puncture biopsy.
